# Managed Private Cloud

Digiserve is bringing to market the ability to leverage 'in the Cloud' technology to move Indonesian businesses forward into the digital future and make the journey to Private Cloud significantly simpler and more predictable for customers

Organisations are always looking for new ways to improve and develop their businesses by implementing new and better technologies. Due to its agility and reliability, Private Cloud has become one of these technologies suitable for use in any industry when looking at how to reduce cost, streamline operational efficiencies and encourage business growth and transformation. You have the choice of hosting your private cloud platform, either you own data centre or via a Co-Location offering in partnership with Telkom Sigma. There environment will be secure and reliable via a network-integrated service creation via our MNS Portfolio.

## Benefits

**Enhance your end user experience** Excellence at measuring the service availability and providing insight into real application performance from end user perspective to drive greater customer journey.

**Improve operational efficiencies** Reduce operational expenses with greater use of automation to improve higher resource utilisation in a dynamic workload allocation and effective vendor management. Bring down the complexity of maintaining infrastructure with a fully managed service by combining our network and managed services expertise to ensure the highest performance levels of mission-critical workloads.

**Improve revenue generator with lower operational costs** Drive growth to improve profitability by transforming technology in accelerating your digital business, and reducing your TCO (Total Cost of Ownership) as well as operating costs.

## Features

**Best in class components** Our solution is engineered, architected, and hardened according to best practices for each component and enterprise-grade business objectives – all delivered as a single, standardised, highly secure, market-leading infrastructure.

**End to end visibility and control of your cloud and network services** Digiserve has the complete end-to-end cloud portfolio in the marketplace with the benefit of a fully managed service on your network, data centre and operational activities. Fully integrated with Telkom Indonesia's broad network to ensure all sites are connected.

**Simple and agile managed service** Make your cloud simpler and safer with single touch point with providing more predictable performance and dramatically reducing time to market.
